EDUCATION

UC Davis

Sep 2019 - Dec 2022

Ph.D. candidate in Computer Science

Davis, CA

- Research interests: **Fuzzing, Program Analysis, Software Security, Compiler Testing**
- Languages: **C/C++ (9/10), Rust (8/10), Python, Java**
- Tools: **LLVM (LLVM contributor w/ 23 commits and 2000+ LoC), Docker, Linux, AFL++**

ShanghaiTech University

Sep 2015 - Jun 2019

B.E. Computer Science and Technology

Shanghai, China

- GPA 3.79/4 (Ranking: 5/124) Excellent Undergraduate of Shanghai (Jun 2019)

WORKING AND RESEARCH EXPERIENCE

Bytedance

Jun 2020 - Sep 2020

Research Intern

Mountain View, CA

- Focused on optimizing fuzzer Angora's gradient solver and alleviate branch collision problem.
- Implemented an LLVM pass in ~2000 lines of C++ and a new gradient solver in ~3000 lines of Rust, [open-sourced](#).
- Improved branch coverage by 41% compared by Angora, 94% compare to AFL++.

Bytedance

Sep 2018 - Aug 2019

Research Intern

Beijing, China

- Assigned to find integer errors using Angora in Bytedance's codebase.
- Designed and implemented a sanitizer as an LLVM pass w/ runtime library using ~1500 lines C++ and ~2000 lines of Rust, maintained Angora ever since.
- Identified **8 crashing errors** that could cause denial of service attack, [CVE-2020-18869](#) and [CVE-2020-18871](#) assigned; found 166 non-crashing errors that could cause program misbehave, reported to developers.

ShanghaiTech University

Nov 2017 - Jan 2018

Lab Intern

Shanghai, China

- Designed subproblem algorithm by combining line search and trust region.
- Implemented the algorithm using Python and did extensive experiments, [open-sourced](#).
- Solved 113/126 problems, achieving a success rate of 89.7%.
- ***An inexact first-order method for constrained nonlinear optimization*** published on *Optimization Methods and Software*.

ABB Group

Oct 2017 - Jun 2018

Research Intern

Shanghai, China

- The goal was to combine ABB's desktop robot [Yumi](#) and [Huskey UGV](#).
- Attached Yumi to an 4-wheel robot to make it autonomous and designed **navigation, mapping, and control** algorithms in around 5000 lines of C++.
- [Demonstrated](#) our prototype to the leader in ABB.

PROJECTS

RITOS

Jan 2020 - Mar 2020

ECS240 Operating system course project

UC Davis

- Designed Rust IoT Operating System (RITOS) on raspberry pi 3.
- Implemented booting code and barebone binary in 1500 lines of Rust.
- Open-sourced [RITOS](#), also contributed to 100-star [Cortex-A to Rust binding project](#).

Athernet

Jan 2018 - Jun 2018

CS120 Computer networks course project

ShanghaiTech University

- Designed computer networks from scratch, using sound as physical layer.
- Implemented Layer 1/2 in 3500 lines of JAVA and Layer 3/4 in 1500 lines of C++, [open-sourced](#).
- Demonstrated prototype by downloading a 10kB file from an FPT server with only athenet access, achieving 16.4 kbps bit rate (Upper bound 22 kbps).

COOL Compiler

Jan 2018 - Jun 2018

CS131 Compiler course project

ShanghaiTech University

- Designed a new language COOL as part of the Compiler course project.
- Implemented end-to-end compiler including lexer, parser, semantic analysis, type analysis, and code generation.
- Implemented in using Flex, Bison, C++, [open-sourced](#).

Screen++

Jun 2017 - Jun 2017

iLab Hackathon team leader

Shanghai, China

- Proposed an application to connect all the screens in different platforms.
- Responsible for the software development & marketing model, constructed the prototype using Python & Apache.
- Won the **3rd prize** in iLab Hackathon.

SafeBox

Jun 2017 - Jul 2017

CS230 Operating system course project

ShanghaiTech University

- Designed an abstraction layer to run untrusted software by intercepting unsafe system calls.
- Implemented the prototype in 1200 lines of Rust, [open-sourced](#).
- Successfully prevented untrusted submission from accessing Internet in online judge [Gradebot](#).

TEACHING

ECS153: Computer Security

2023 Spring Quater

ECS032A: Introduction to Programming

2020 Fall Quater

CS110: Computer Architecture I

2018 Spring Semester
