EDUCATION

UC Davis

Sep 2019 - Jun 2024

Ph.D. candidate in Computer Science

Davis, CA

- Research interests: **Fuzzing, Program Analysis, Software Security, Compiler Testing**
- Languages: **C/C++ (9/10), Rust (8/10), Python (8/10), Java**
- Tools: **LLVM (LLVM contributor w/ 23 commits and 2000+ LoC), libFuzzer, AFL++, Docker**

ShanghaiTech University

Sep 2015 - Jun 2019

B.E. Computer Science and Technology

Shanghai, China

- GPA 3.79/4 (Ranking: 5/124)
- Excellent Undergraduate of Shanghai (Jun 2019) Scholarship of Academic Excellence (Nov 2017)

EXPERIENCE

Advanced Micro Devices (AMD)

Jun 2022 - Dec 2022

Research Intern

San Jose, CA

- Focused on testing compiler backend of AI Engine.
- Implemented a state-of-the-art fuzzer to accommodate for the compiler infrastructure, [open-sourced](#).
- Found over 40 missing features in AI Engine. Found **57 confirmed bugs in LLVM**, **31 fixed**, [bug tracker](#).
- Lightning talk accepted to 2022 LLVM Developer's Meeting, [recording](#).

Bytedance

Jun 2020 - Sep 2020

Research Intern

Mountain View, CA

- Focused on optimizing fuzzer Angora's gradient solver and alleviate branch collision problem.
- Implemented an LLVM pass in ~2000 lines of C++ and a new gradient solver in ~3000 lines of Rust, [open-sourced](#).
- Improved branch coverage by 41% compared by Angora, 94% compare to AFL++.

Bytedance

Sep 2018 - Aug 2019

Research Intern

Beijing, China

- Assigned to find integer errors using Angora in Bytedance's codebase.
- Designed and implemented a sanitizer as an LLVM pass w/ runtime library using ~1500 lines C++ and ~2000 lines of Rust, maintained Angora ever since.
- Identified **8 crashing errors** that could cause denial of service attack, [CVE-2020-18869](#) and [CVE-2020-18871](#) assigned; found 166 non-crashing errors that could cause program misbehave, reported to developers.
